DEVAN

V1 COLOURLESS
V2 COLOUR

Same frame, same code: only the portrait (and the grade that suits it) changes.

1. The two versions

Version	Page	Portrait	Look
V1 Colourless	devan-v1-colourless.html	assets/subject/devan-v1-colourless.png	black-and-white portrait, teal/cream grade 0.35
V2 Colour	devan-v2-colour.html	assets/subject/devan-v2-colour.png	colour portrait, grade 0.12, saturation 1.12 so skin stays natural

Everything else is shared: the same CSS, scroll-hero.js and scroll-hero-glass.js, the same text, glass and background. A pill in the header switches between the two versions.

Figure 1.1 Your two portraits as supplied (already cut out; used unchanged). Depth maps were generated for the 2.5D effect.

2. Content (DEVAN)

Slot in the frame	Now says
Header logo / tagline	DEVAN / MAKING COMPLEX THINGS SIMPLE AND SIMPLE THINGS MEMORABLE. (from your bio)
Kicker	CREATIVE DEVELOPER / TECH DESIGNER
Name	Devapriyan G.S. (the final dot in the accent purple)
Counter	∞ CURIOSITY FOR NEW TECHNOLOGY
Bio / second bio	I’m Devan, a creative developer and tech designer... / Every project starts the same way...
List label + 01-03	CURRENT FOCUS: interactive websites and scroll-driven experiences; UI / UX design for apps and digital products; creative coding, motion and 3D on the web
Note	Selected work and code are on GitHub; experience and background on LinkedIn.
Signature + icons	DEVAPRIYAN G.S. / DEVAN with GitHub and LinkedIn buttons (links still to be filled in)

3. V1 Colourless

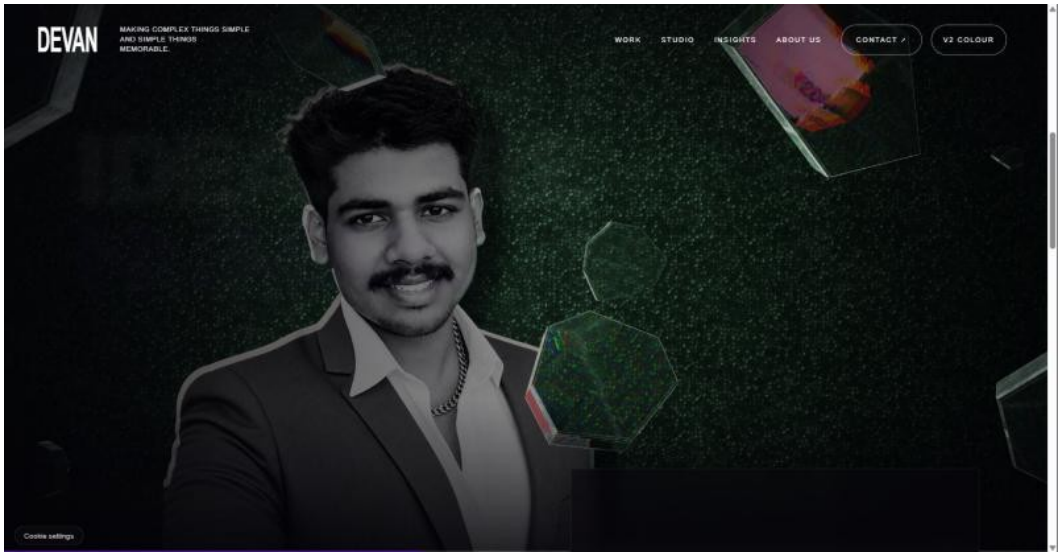

Figure 3.1 Section entering: glass drifting past, a rupee image inside a near shard (top right).

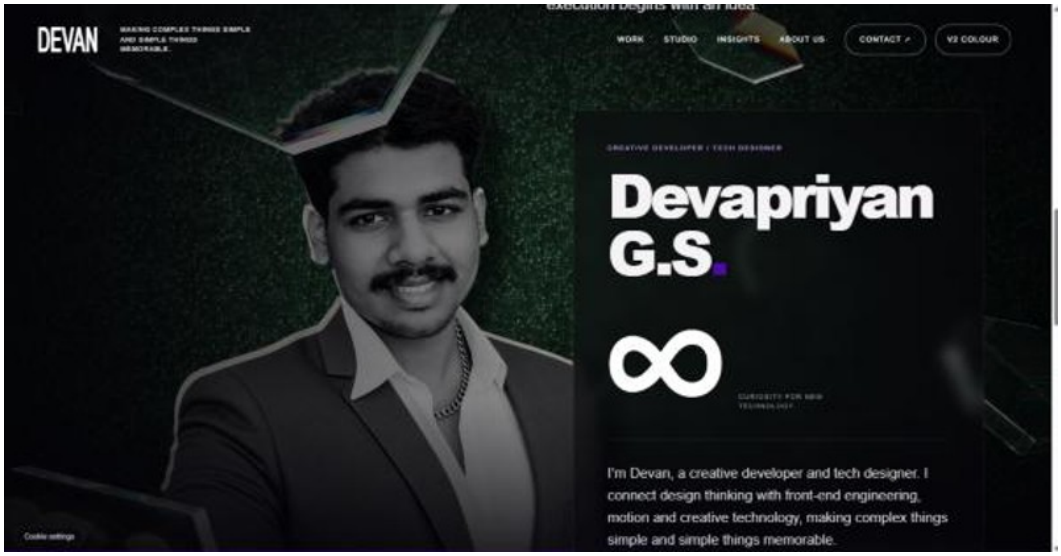

Figure 3.2 Name and the infinity counter.

Figure 3.3 Current focus list and the signature with GitHub / LinkedIn.

4. V2 Colour

Figure 4.1 Natural skin tones after the lighter grade; shards curve around the head.

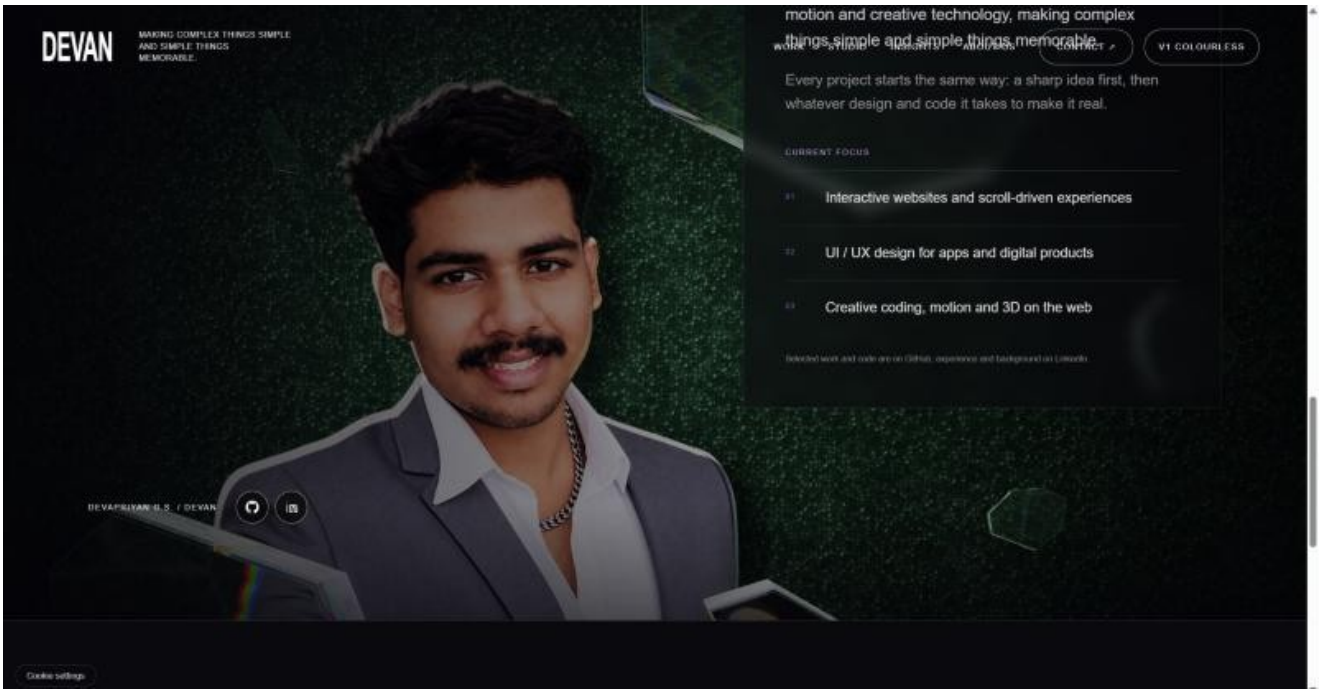

Figure 4.2 End of the section: focus list, signature, glass at the edges.

Figure 4.3 Phone (375 x 812): centred portrait panel, 7 shards, no horizontal scroll.

5. Engine changes in this round

- **Shards dodge the head:** near shards curve up (above) or down (below) as they pass the portrait's x position, so your face is never covered, whatever the framing.
- **Upper lanes raised** to fit the new, higher framing (lanes 0.88 / 0.8 / 0.96 / 0.84 of half-height).
- **New options** `data-grade` (default 0.35) and `data-saturation` (default 1) on .shf-scene; V2 uses 0.12 / 1.12.
- **Softer rim light** (0.55 to 0.26) so sharp cut-outs do not get a sticker-like outline.
- ∞ **counter style**: `strong.shf-infinity` enlarges and lifts a single symbol so it sits like the original '20+'.

6. Editing

Both pages are generated from `index.html` (the template) so they can never drift apart. Change text in `tools/make_devan_pages.py`, then run:

```
python tools/make_devan_pages.py
```

New portrait that is already cut out (transparent background):

```
python tools/prepare_portrait.py photo.webp assets/subject/devan-v3
```

Still to do / your call

- Add your real GitHub and LinkedIn URLs (marked TODO in both pages, or in make_devan_pages.py).

- The big headline (IDEAS ARE HUMAN.) and the lead sentence are still the grubogrubo wording from the replica. For your own site they should be your words; send them and both versions update in one run.
- Header nav (WORK, STUDIO, INSIGHTS, ABOUT US) and the CONTACT link are placeholders.
